

Over 10 Million
Shipments tracked per month

Our MyShipMatrix.com Business Intelligence reports can give you the facts you need to:

- Accurately measure your transportation costs
- Cut unnecessary expenditures
- Gain instant visibility into your shipping operations

How much do you spend on shipping?

Chances are, it's more than you should. How do we know? Because ShipMatrix has 10 years of experience helping customers like you streamline their shipping operations and reduce shipping spend. Despite the best efforts of carriers, packages are delivered late, lost, or incorrectly billed. Understanding the magnitude and specific aspects of such errors for your business can help you stretch your budget and manage your relationship with your customers and with your carriers.

Control and reduce costs

MyShipMatrix™ is a turnkey web-based software application that simplifies the process of reading and reviewing electronic invoices, helping shippers reduce annual shipping costs. MyShipMatrix hosts, monitors and maintains historical shipping data on a secured server and clients simply log on to access the reports.

Data you can trust

MyShipMatrix™ was designed by experts in the small package industry to meet the needs of shippers who do not have their own small package shipping database and information systems. Drawing from recognized parcel industry expertise, MyShipMatrix™ has created dozens of shipment analysis reports and makes them available to you on a secure website from the convenience of your Internet browser. Multi-level row level security and account-based logins protect your sensitive data while you access your reports online from any desktop PC.

Improve Service

- **Address Corrections** – MyShipMatrix records packages assessed an address correction surcharge and the carrier correction. By applying the correction to your customer database, you can prevent the surcharge in the future and improve the service level for your customers.
- **Contract Rate Variance** – Are you getting your agreed upon contract rates? We load your exact custom rate table into the system. Any deviations discovered can be communicated to your carrier.
- **Billed, Not Shipped** - Our integrated flagship tracking system, ShipMatrix Enterprise, processes your shipping data and identifies claims with incredible accuracy.
- **Service Issues** – Are you paying express rates for packages you could have shipped by ground without sacrificing transit time? What percent of your packages are delivered late? Are any packages lost or damaged in transit? MyShipMatrix can answer these and many other service questions for you!

Features

- **Access from Anywhere** - The user-friendly web portal allows access to multiple users in your organization anywhere, anytime.
- **Easy to Use** - MyShipMatrix uses a point-and-click interface within the convenience of a browser. Reports are downloadable to MS Excel or comma-delimited files. No training or additional IT expertise is needed!
- **Multi-level Data Availability** - Your login account can be linked to a single shipping account, a group of account numbers or the corporate account to limit data access within your organization or drill down to the account level.
- **Secure** - A separate database for every client provides excellent security for your data, optimal report performance and customization opportunities.
- **Continually Enhanced** - New reports and features are integrated into MyShipMatrix on a monthly basis... automatically! Best of all, we won't charge you for upgrades!
- **Al a Carte Menu of Choices** - Choose from UPS electronic invoice reporting, FedEx electronic invoice reporting, ShipMatrix Enterprise tracking or any combination, depending on YOUR business needs.
- **Compatible with all major carriers** - We can meet your small package tracking needs, no matter which carrier you use: UPS, FedEx, DHL or USPS.
- **Historical data** - Want to know how your account has performed over time? We can accumulate invoice and tracking data for your desired period of time.
- **Custom Reports Available** - Our software solutions are designed with flexibility in mind. Contact us with your special needs and we will work to customize a solution.
